Professional Summary

Senior technology executive with **21+ years** of leadership across **Investment Banking and Assets & Wealth Managemen**t at Tier-1 global banks (**UBS, JPMorgan, Goldman Sachs**). Proven track record of building and scaling Agentic AI, GenAI, and RAG-based data platforms — currently leading UBS's **Client Risk Rating** modernization using LangChain, LangGraph, MCP, and A2A to deliver a high-volume, low-latency compliance intelligence platform. Deep expertise in Data Engineering, Cloud Migration (**Azure Databricks, AWS**), and IB Regulatory Reporting (**MIFID-II, SFTR, EUBR/UKBR**), with a strong record of delivering zero-breach regulatory programs and **Financial Crime Prevention platforms** at enterprise scale. Experienced in managing cross-functional teams of **10–12** engineers, driving **AI strategy, data governance, and digital transformation** from architecture through production.

Core Competencies

AI/ML Strategy & Roadmap • Agentic AI Platform Engineering • Data Architecture & Governance • Financial Crime Compliance • IB Regulatory Reporting • Cloud Migration & Modernization • Team Building & Leadership • Stakeholder Management • Digital Transformation

Experience

DIRECTOR – AI & DATA ENGINEERING | UBS BUSINESS SOLUTIONS | PUNE | APR 2025 – PRESENT

- **AI & Innovation Lead, Financial Crime Prevention Compliance Reporting**: Architected and leading UBS's first Agentic AI & RAG-based modernization of the Client Risk Rating (CRR) platform — transforming a legacy brown-field processing stack into a high-volume, low-latency, green-field platform using LangChain, LangGraphs, and LLM-powered agents integrated via A2A and MCP protocols, targeting a **60%+** reduction in manual compliance review time across Financial Crime Prevention workflows.

- Leading end-to-end **Solution Architecture** for **Client Risk Rating (CRR) and SVC** applications across microservices, distributed systems, and agentic AI orchestration layers — defining technical design standards, enforcing code quality processes, and integrating Vector DB and Embeddings to enable semantic search and context-aware risk scoring at enterprise scale.

DIRECTOR – DATA STRATEGY & MODERNIZATION | UBS BUSINESS SOLUTIONS | PUNE | APR 2022 – MAR 2025

- Directed end-to-end delivery of complex **IB Market Regulatory Reporting** group across a 10–12-member engineering team, implementing CI/CD automation pipelines that reduced deployment cycle time by ~40% and improved release frequency from monthly to bi-weekly, ensuring on-time delivery against stringent regulatory deadlines.

- **Led Data Engineering Chapter** for IB Markets Regulatory Reporting, governing 5+ regulatory frameworks (**MIFID-II, RTS23, EUBR/UKBR, SSD, SFTR**) — overseeing ingestion, reconciliation, and distribution of deal-store data for ~10 million+ daily trade & transaction records with full audit trail and zero regulatory breach incidents across a 3-year delivery window.

- Designed and executed migration strategy from **Cloudera Data Platform to Azure Databricks**, leveraging **Azure Data Factory, ADX, and Apache Flink** — reducing data processing latency by **~50%**, cutting infrastructure licensing costs by **~35%**, and enabling elastic scaling for peak regulatory reporting windows without manual intervention.

- Partnered with business, operations, and risk teams to identify and remediate 3 critical IT and operational risk items (**ORI, MERS, SERA**), delivering solutions within agreed timelines and achieving full closure with zero regulatory escalations — strengthening UBS's control framework for IB Markets technology.

VICE PRESIDENT – DATA & CLOUD TRANSFORMATION | JPMORGAN SERVICES | MUMBAI | MAY 2009 – MAR 2022

- Spearheaded a 13-year as **Engineering Lead**, multi-phase enterprise data platform (**Investment Product & Portfolio Governance**) serving Product & Portfolio Governance reporting across global IB operations, leading end-to-end data ingestion, reconciliation, validation, and distribution pipelines processing millions of deal-store records daily with zero-defect regulatory

- Built and managed a high-performing engineering team of 6–8 engineers, instituting Agile delivery practices, quality gates, and performance testing frameworks that improved overall team throughput by **~35%** and reduced production incidents through proactive defect detection.

- Developed the physical data model for **Investment Product & Portfolio Governance** data pipelines considering different functional & operational risk reporting. Drive the modernization of **IPGC & UPGC Data Platform** by moving to Cloud Foundry/**AWS & Oracle Cloud Services**

- Led the strategic modernization of IPGC & UPGC Data Platform from on-premise to Cloud Foundry, AWS, and Oracle Cloud Services, reducing infrastructure costs by an estimated **30–40%** and improving platform scalability to support **3×** data volume growth without linear headcount addition.

- Established **architecture governance** practices through structured design review sessions with SMEs and cross-functional teams, standardizing data engineering patterns and reducing rework cycles by **~25%**, accelerating time-to-production for new pipeline features.

SR. SOFTWARE ENGINEER | ACCENTURE SERVICES PVT LTD | MUMBAI | FEB 2005 – APR 2009

- Embedded with **Goldman Sachs Group** as an **Accenture engineer**, contributing to large-scale, mission-critical application development across IB technology systems — building production-grade, cloud-native microservices using Spring Boot and Spring Cloud deployed on AWS EC2 and S3, establishing the engineering foundation that underpins 21 years of Tier-1 banking technology delivery.

- Delivered measurable backend performance improvements by redesigning SQL query structures and JPA/Hibernate ORM mappings across high-traffic financial data APIs — reducing average API response times by 25% and eliminating N+1 query bottlenecks that impacted downstream reporting latency across multiple trading system integrations.

- Championed engineering quality by implementing comprehensive JUnit and Mockito test suites across microservice modules — improving measurable code quality scores by 30%, establishing test coverage standards that reduced regression defects and became the baseline testing framework adopted across the Goldman Sachs engagement team.

Technical Skills

- **Programming**: Java, Python, SQL
- **AI/ML**: GenAI, Agentic AI, LLM, RAG, MCP, A2A, LangChain, LangGraph, Embeddings, Vector DB
- **Cloud/Data:** HDFS, ADLS, AWS S3, ADX, ADF, Azure Databricks, Spark, Confluent Kafka, Flink
- **Microservices:** SpringBoot, REST APIs, JWT, OAuth
- **DevOps**: Docker, Kubernetes, EKS, AKS

Professional Certifications

- Databricks Datalake Platform — Databricks, APR 2026
- Databricks AI Agents Fundamentals — Databricks, APR 2026
- Databricks Generative AI Fundamentals — Databricks, APR 2025
- Azure Cloud Fundamentals — Microsoft, APR 2025
- Azure Data Fundamentals — Microsoft, APR 2025
- Azure AI Fundamentals — Microsoft, APR 2025
- AWS Solution Architect Associate — AWS, Jan 2022
- Kubernetes Application Developer — Linux Foundation, Jan 2022
- Certified Scrum Master — Scrum Alliance, APR 2015
- Certification in Financial Market — NSE, APR 2008

Domain Knowledge

- FINANCIAL PRODUCTS & PORTFOLIO RISK
- MARKET REGULATORY REPORTING
- GROUP COMPLIANCE & OPERATING RISK

Education

JUN 2005

Bachelor of Engineering | Information Technology | University of Rajasthan | Jaipur, Rajasthan

4.0 GPA • Member of University's Honor Society
